Embroidery Software

USER'S MANUAL

HyperFont™

SINGER® | Futura™

Inside HyperFont

HyperFont is designed to **automatically digitize lettering** for embroidery. HyperFont has a **Wizard** that walks you through a step-by-step process for creating an **automatic** embroidery design. In this segment, each step and process will be defined.

Open Wizard

You must launch the Software (see section called "How to Open FUTURA) to use the HyperFont wizard.

Step	Action	Result
>1	Select **HyperFont...** from the Create drop-down menu.	HyperFont Wizard/Introduction page will open.
>2	Click **Next**.	

>1: Enter Text

This is the step for typing in the lettering for embroidery and selecting a font style.

Enter Text

Step	Action	Result
>1	Type **Text** in the Text box.	

Select Font

Step	Action	Result
>1	Click **Select** in the **Select (Font)** box.	A list of fonts from **Windows Fonts** will open.
>2	Choose a **Font** from the list.	
>3	Click **OK**.	
>4	Click **Next**.	

>2: Embroidery Settings

In the 2nd step the Wizard is offering the option of two types of filling of the text. **"Fill Stitch"** - has only one stitch angle. This is a good choice for **large lettering**. **"Column Stitch"** is like "traditional lettering" with the columns filled with satin stitches.

Step	Action	Result
>1	Check **Fill Stitch**.	
	or	
>2	Click **Next**.	Text will be filled with stitches.

Finished fonts using HyperFont.

ATTENTION:
It is suggested when embroidering small letters that the needle thread tension be reduced.

It is always a good idea to sew a test sample on a swatch of fabric similar to that of the final project.
